True Wave™ Far Infrared Heaters Surround You In Wellness

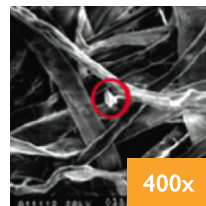

True Wave™ Far Infrared heaters combine Carbon and Ceramic to produce healing infrared heat that is unmatched.

- 1) Our heaters are comprised of micro-thin carbon fibers (1/1000th the thickness of a human hair) combined with our patented ceramic compound.
- 2) We start with patented micro-fine highly emissive carbon fibers.
- 3) The carbon fibers produce long-wave infrared heat which penetrates deep in to the soft tissue of the body.
- 4) The micro-fine ceramic particulates increase the emissivity of the infrared wavelength to boost output so you receive more high quality infrared during your session.

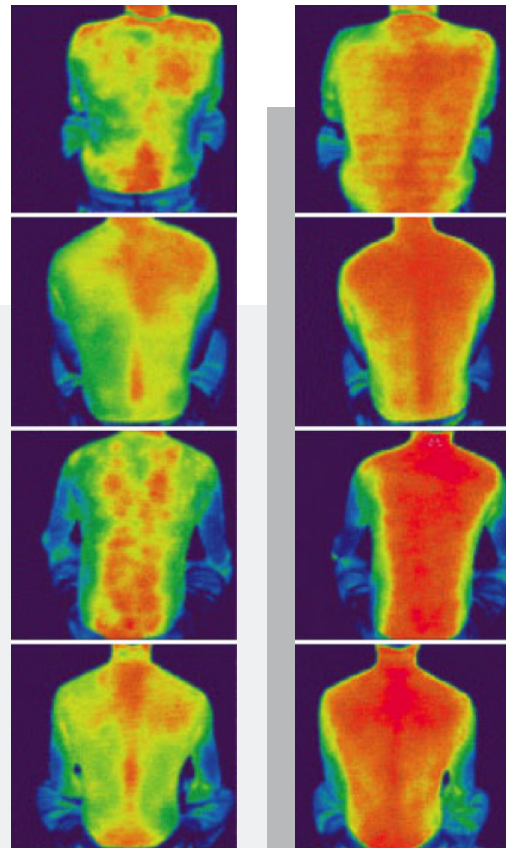

Ultra-fine Carbon Fibers (1/1000th of a hair)

Patented Micro-Fine Compound Ceramic

Core Body Temp Comparison

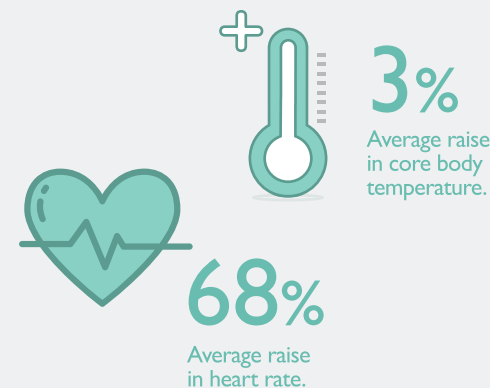

Other Infrared Heaters

Our True Wave™ heaters heat your body evenly. The total coverage of your body core is the key to effective infrared therapy.

The First Combination Carbon/Ceramic Heaters with virtually no-EMF
